

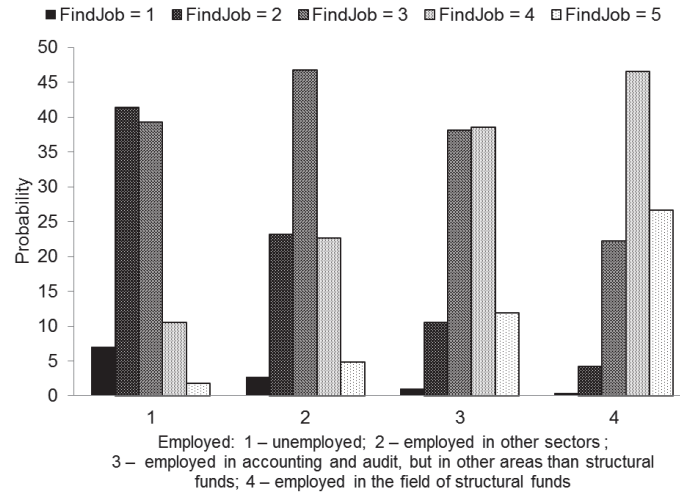

**Figure 2.** Evolution of the perception of finding a job in relation to the actual status of the student on the labour market

Source: authors' calculation

## **Conclusion**

The results of this study show that the perceptions students have regarding finding an adequate job are realistic. The empirical estimations are in accordance with the theories to be found in the academic literature. Moreover, the explanatory variables can be found, measured and interpreted. The conclusions drawn from the analysis can be easily generalized and adapted to any university specialization. However, it is necessary for the instructors, professors and practitioners to know well these mechanisms and manipulate them with the goal of the best functioning of the educational market.
